Summary

Final-year IT student specializing in full-stack web development using the MERN stack and Next.js. Experienced in building responsive, production-grade web applications with TypeScript, REST APIs, and real-time features. Seeking to apply engineering skills in fast-paced product teams.

Education

Sarvajanik College of Engineering and Technology, Surat — Aug 2022 – May 2026
Bachelor of Technology (B.Tech) in Information Technology | CGPA:- 8.69

Skills

- **Languages**: C/C++, Python, JavaScript, TypeScript
- **Web Technologies**: React.js, Next.js, Express.js, Node.js, REST APIs, WebSocket, Tailwind CSS
- **System Programming**: Multithreading, Socket Programming, Memory Management
- **CS Fundamentals**: DSA, OOP, OS, DBMS, Computer Networks
- **Tools & Databases**: Git, Linux, Postman, PostgreSQL, MongoDB, Vercel, Netlify, Render, Railway

Projects

Zirwa Qurbani Service | E-Commerce Platform

Technologies: Next.js, React, TypeScript, Tailwind CSS, REST APIs
Links: Live | Source Code

- Developed a full-stack booking platform using Next.js App Router, featuring slot-based order management and a multi-step checkout flow.
- Engineered a dynamic order management system with real-time status tracking, an integrated discount engine, and automated invoice generation.
- Designed a responsive, mobile-first UI across 10+ pages using Tailwind CSS and reusable TypeScript components.
- Implemented efficient client-side state management via React Hooks and localStorage for seamless cross-page data persistence.

AI-based Invoice Generator (Powered By Gemini)

Technologies: React, Node.js, Express.js, MongoDB, Gemini API
Links: Live | Source Code

- Designed and developed a full-stack AI-powered invoice generation system enabling automated invoice creation from user inputs and uploaded documents.
- Implemented AI-driven data extraction and validation to generate structured invoices with minimal manual intervention.
- Built secure REST APIs for invoice creation, storage, retrieval, and status tracking with role-based access control.

User Management System | Secure RBAC Platform

Technologies: MongoDB, Express.js, React.js, Node.js, JWT, bcrypt
Links: Live | Source Code

- Developed a full-stack user management platform using the MERN stack with a responsive React UI, Context API for state management, and Vite build tooling.
- Implemented secure authentication and authorization using JWT and bcrypt, featuring token validation, session timeout, and inactive user lockout mechanisms.
- Engineered a robust Role-Based Access Control (RBAC) architecture with strict data isolation and protected API endpoints for Admin, Manager, and User roles.
- Built comprehensive administration capabilities including user lifecycle management (create/update/deactivate), search/filtering functionality, and detailed audit logging.

Certifications

- Foundations of Cybersecurity – Google
- Play It Safe: Manage Security Risks – Google
- Connect and Protect: Networks and Network Security – Google
- Tools of the Trade: Linux and SQL – Google
